

DIN 912

DATA SHEET

All dimensions in mm

ISO 4762
CSN 021143
PN 82302

UNI 5931

Legend:

- d - the nominal diameter of the thread
- k - head height
- t - groove depth
- dk - head diameter
- L - length of bolt
- s - size of the internal hexagon

Makings:

- Steel: 8.8, 10.9, 12.9
- Stainless: A2, A4
- Plastic: -
- Non Ferrous: -
- Thread: 6g, 5g6g for strength 12.9

Notes:

Chemical Composition and Tempering

According to NEN-EN-ISO 898-1:2013 this table specifies limits for the chemical composition of steels and minimum tempering temperatures for the different property classes of bolts, screws and studs. The chemical composition shall be assessed in accordance with the relevant International Standards. For fasteners that have to be hot dip galvanized, the additional material requirements given in ISO 10684 apply.

TABLE 2: CHEMICAL COMPOSITION AND TEMPERING

| Property class | Material and heat treatment | Chemical composition limit (cast analysis, %) ^a | | | | | Tempering temperature °C min |
|---------------------|--|--|-----------|-----------|-----------|------------------------|---------------------------------|
| | | C min. | C max. | P max. | S max. | B ^b max. | |

| | Carbon steel quenched and tempered or.. | 0,25 | 0,55 | 0,025 | 0,025 | | |
| | Alloy steel quenched and tempered ^g | 0,20 | 0,55 | 0,025 | 0,025 | | |
| 12.9 ^{h,i} | Alloy steel quenched and tempered ^g | 0,30 | 0,50 | 0,025 | 0,025 | 0,003 | 425 |
| 12.9 ^{h,i} | Carbon steel with additives (e.g. Boron or Mn or Cr or Molybdenum) quenched and tempered | 0,28 | 0,50 | 0,025 | 0,025 | 0,003 | 425 |

a) In case of dispute, the product analysis applies. **b)** Boron content can reach 0,005 %, provided non-effective boron is controlled by the addition of titanium and/or aluminium. **c)** For cold forged fasteners of property classes 4.6 and 5.6, heat treatment of the wire used for cold forging or of the cold forged fastener itself may be necessary to achieve required ductility. **d)** Free cutting steel is allowed for these property classes with the following maximum sulfur, phosphorus and lead contents: S: 0,34 %; P: 0,11 %; Pb: 0,35 %. **e)** In case of plain carbon boron steel with a carbon content below 0,25 % (cast analysis), the minimum manganese content shall be 0,6 % for property class 8.8 and 0,7 % for property classes 9.8 and 10.9. **f)** For the materials of these property classes, there shall be a sufficient hardenability to ensure a structure consisting of approximately 90 % martensite in the core of the threaded sections for the fasteners in the "as-hardened" condition before tempering. **g)** This alloy steel shall contain at least one of the following elements in the minimum quantity given: chromium 0,30 %, nickel 0,30 %, molybdenum 0,20 %, vanadium 0,10 %. Where elements are specified in combinations of two, three or four and have alloy contents less than those given above, the limit value to be applied for steel class determination is 70 % of the sum of the individual limit values specified above for the two, three or four elements concerned. **h)** Fasteners manufactured from phosphated raw material shall be dephosphated before heat treatment; the absence of white phosphorus enriched layer shall be detected by a suitable test method. **i)** Caution is advised when the use of property class 12.9/12.9 is considered. The capability of the fastener manufacturer, the service conditions and the wrenching methods should be considered. Environments can cause stress corrosion cracking of fasteners as processed as well as those coated.

Minimum Ultimate Tensile loads

According to NEN-EN-ISO 898-1:2013 the minimum ultimate tensile loads are applicable for coarse pitch thread.

TABLE 4: MINIMUM ULTIMATE TENSILE LOADS FOR STEEL METRIC COARSE FASTENERS

| Thread ^a _d | Nominal stress area As,nom ^b mm ² | Property class | | | | | | | | |
|-------------------------------------|---|--|---------|---------------------|---------|---------|----------------------|---------|---------------------|-----------|
| | | 4.6 | 4.8 | 5.6 | 5.8 | 6.8 | 8.8 | 9.8 | 10.9 | 12.9/12.9 |
| | | Minimum ultimate tensile load, Fm,min (As,nom × Rm,min), N | | | | | | | | |
| M3 | 5,03 | 2 010 | 2 110 | 2 510 | 2 620 | 3 020 | 4 020 | 4 530 | 5 230 | 6 140 |
